SWITCH MODE POWER SUPPLIES

MCS 2.5...40 A • 60 °C • IP20

- 1-, 2-phase and 3-phase
- For universal applications, worldwide
- Full power up to 60 °C ambient temperature
- Adjustable output voltage
- Slim, book-like design saves space
- Pluggable screw terminals
- Parallel and series connection operation possible
- Additional model with DeviceNet certification
- Approvals for applications worldwide

ECO-RAIL 1.3...10 A • 55 °C • IP20

- Single-phase
- Wide voltage input that is easily adjustable
- Full power up to 40 °C ambient temperature
- Adjustable output voltage
- Slim, book-like design saves space
- Two mounting options
- Pluggable screw terminals
- Series connection operation possible
- Approvals for applications worldwide

EVOLUTION 5...40 A • 70 °C • IP20

- 2- and 3-phase
- Nominal input voltage range of 3 x 360...520 V AC or 480...745 V DC
- Continuous 2-phase operation possible
- Full power at 55 °C ambient temperature
- Adjustable output voltage
- Extra power function for 4 seconds 50 % additional power
- Compact design, good cooling
- Extended temperature range of -25 ... +70 °C
- Two-color LED display
- Convenient DIN-rail mounting
- Parallel and series connection operation possible
- Approvals for applications worldwide

ECO-POWER 0.6...10 A • 50 °C • IP20

- Single-phase
- Wide voltage input that is easily adjustable
- Full power up to 40 °C ambient temperature
- Adjustable output voltage
- Flat design
- Strong, perforated housing allows optimum heat dissipation
- Convection cooling
- Screw terminals with touch protection
- Series connection operation possible

MCS-B 0.6...10 A • 70 °C • IP20

- Single-phase
- With wide voltage input for worldwide use
- Full power at 55 °C ambient temperature and 230 V AC input voltage
- Adjustable output voltage
- Slim, book-like design saves space
- Spacer for optimum air circulation
- Parallel and series connection operation possible
- Additional model with DeviceNet and NEC Class2 approval
- Approvals for applications worldwide

SWITCH MODE POWER SUPPLIES

Single-phase, primary switched

– stabilized output voltage
short-circuit and
overload protected

– touch protected acc. to
EN 60529 (IP20)

MCS

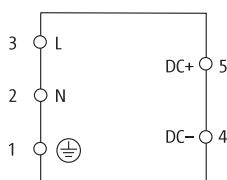

Current 5 A
Output voltage 12 V DC

MCS

Current 6 A
Output voltage 5 V DC

Circuit diagram

Ordering data

Output rating

12 V DC / 5 A	60 W	85040
5 V DC / 6 A	30 W	85041

Input

Input voltage	90...265 V AC, 110...300 V DC	
Input current	1.1 A (115 V AC); 0.6 A (230 V AC)	0.5 A (115 V AC); 0.3 A (230 V AC)
Inrush current after 1 ms	≤ 22 A	
Primary fusing	max. 10 A	
Frequency	50/60 Hz	

Output

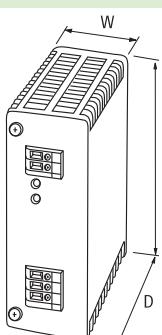

Output voltage	12 V DC (SELV) ± 1 %, 10...15 V adjustable	5 V DC (SELV) ± 1 %, 4...6 V adjustable
Output current	5 A (+55 °C); 5...6 A (+45 °C)	6 A (+60 °C); 6...7.5 A (+50 °C)
Efficiency	85 %	80 %
Mains failure bridging	≥ 10 ms (115 V AC); ≥ 70 ms (230 V AC)	≥ 12 ms (115 V AC); ≥ 90 ms (230 V AC)
Ripple	≤ 20 mV eff	≤ 10 mV eff
Spikes	≤ 200 mV ss	≤ 50 mV ss

Protection	short-circuit and overload protected	
LED display	LED green for output voltage	
Parallel usage/serial usage	no/yes	

General data

Standards	EN 60950-1, EN 61204-3, EN 55022 B, EN 61000-3-2	
Temperature range	0...+55 °C	0...+60 °C
Relative humidity	5...95 %, no condensation	
Mounting method	DIN-rail mounting TH35 (EN 60715)	
Weight	0.45 kg	0.50 kg
Dimensions	H x W x D	107.5 x 42 x 97.5 mm

Dimension drawing

Notes

MCS switch mode power supplies meet the EN 61000-3-2 guideline.
Mounting adapter for side mounting see page 1.3.18.

SWITCH MODE POWER SUPPLIES

NOTES

BUFFER MODULES/REDUNDANCY MODULE

General information about MB Cap

MB Cap - Stable power supply secured processes

Voltage fluctuations are a common problem in industrial and commercial environments. They occur with greater frequency since power distribution systems are becoming increasingly more complex. Voltage fluctuations have considerable consequences: Production processes are interrupted, machines stop working, systems have to be reconfigured. All this costs time and money. In the worst case scenario a system breakdown can cause data loss and failure of machines and systems.

The Murrelektronik modules of the MB Cap Ultra series are buffer modules that ensure a stable power supply, thus guaranteeing secure industrial processes. They store energy and bridge voltage fluctuations from up to 38 seconds at 10 A or for several minutes at 1 A, thanks to maintenance-free ultra capacitors.

Advantages:

- Life time maintenance-free – low operating costs
- Cost-efficient – no extra costs respectively no change of batteries
- Safely buffered – buffer time up to 38 seconds at full load (10 A)
- System flexibility for your individual applications
 - long buffer time MB Cap Ultra single module
 - longer buffer time with extension module
 - longer buffer time due to cascading
 - longer buffer time due to selective protection of the most critical loads
- Safe, intelligent shutdown of industrial PCs
 - avoids data loss due to destruction
 - prevents damages to PLC/PC, machines and installations

General information about MB Diode

MB Diode eliminate downtime

Machine failure can cause high costs. In order to prevent this, electrical engineers take extensive measures to increase the reliability of their machines and installations. Murrelektronik can help prevent this with the new redundancy module: MB Diode

MB Diode decouples with power supply units

If a power supply fails, this module will integrate a connected spare power supply unit without interrupting operation. In the sense of a redundant design, all power supply units are integrated into the supply system through one or several modules of the MB Diode series.

The redundancy module from Murrelektronik does not only provide an immediate solution, it also reports the problem to the control with integrated signal contacts. In addition, the failure is indicated via LEDs located directly at the MB Diode module.

MB Diode is contained in a compact housing. A similar housing is used for MICO, Murrelektronik's intelligent power distribution system. Thanks to a bridge system, several redundancy modules can be connected together or to MICO modules. This considerably reduces wiring work. Spring clamp terminals can be easily connected to cables with wide diameters.
